Education

high school
(SMA N 1 TUNTANG)

Summary

Hi, I'm Alief Prihantoro, in social media call me MuryP. I'm a "Front end Developer" but I know little about "back end" and "devops". On internet I use social media and blog for my documentations. And I like learn coding from anywhere, especially on Youtube.

Working

Create Personal Blog

For the back end problem, I use one of the frameworks, namely "hugo". Even though I don't know the go lang language. Because this is a static site generator, to make it more dynamic I use the Disqus comment field.

For front end problems, I use HTML, CSS, and javascript without a framework. But for css myself I was helped by sass.

For deployment problems, I use a shell script.

And For the server itself, I use netlify with the help of gitlab for repo storage.

See me on
